SUPPLEMENT TO  
REPORT NO.

*510.  
857*

1. The Fala Hydroelectric Plant is on the Drava River, one kilometer from the Fala railway station on the Maribor-Dravograd railway line.
2. Map identification: Letters correspond to those on the attached map.
  - A. Main building or engine room, constructed of reinforced concrete with a tile roof, dimensions 50 x 12 x 12 m. This building contains six turbo-generators, with turbines and generators on the same axle, and control devices.
  - B. Administration building, 14 x 10 m, two stories, brick construction, with a tile roof.
  - C. Transformers.
  - D. Distributor station. The switches, which were manufactured by Brown-Boveri Werke A.G., Vienna, are oil switches (oljna stikala) with voltage and current transformers (napetostni in tokovni transformatorji).\*
  - E. )
  - F. ) Single-story workshops, stone construction, with tile roof.
  - G. )
- Dam: Made of reinforced concrete with four locks. The fourth lock, on the right bank of the Drava River, was constructed to permit passage of rafts and other small river craft. The operation of the flood gates is automatic.
3. The total potential output of the power plant is 42,000 Kva, but the installations, which were built during and after the First World War, are in poor condition and actual output of electric energy, therefore, does not exceed 36,000 or 37,000 Kva.

4. Before the last war, the Fala plant's current was fed into an overhead high voltage line via Maribor, Slovenska Bistrica, Konjice, Celje, and Lasko to Trbovlje, but in 1945 an 80 Kv line was connected directly with other overhead lines of the DES system (Drzavne Elektrarne Slovenije - Slovene State Electrical System).
5. The power plant has 80 employees. Office employees and technicians live in Maribor, where the Fala Power Plant has a branch office.

Key personnel:

Engineer Karl Doversek, director; 35 years old; ardent Communist; formerly director of the Dravograd Power Plant.

Alfred Eifried, deputy director and chief clerk; of German birth; politically neutral.

25X1A \*  Comment: The meaning of this statement is unclear. Reference might possibly be to a top charging switch on an oil-cooled transformer.
